

PHY 1901 | Introduction to Innovative Projects

Assignment – 3 | Winter Semester 2021-22

TD1 | SJT202 | Dr. Ramasubramanian V

by

Sharadindu Adhikari | 19BCE2105

Soumyadip Mondal | 19BCE2107

Components used:

1. Cardboard from Amazon parcel
2. Recycled bottles of Mountain Dew
3. [thrown-away] Sand paper from the construction site of R block
4. Leftover Threads from the wholesale packaged goods of D-Annex RRC Special Mess, Men's Hostel
5. Decorated tapes (made from old coloured papers, which we used during EVS project in 1st semester)
6. Plastic flower-piece pierced from an old memento we received in a Hackathon
7. Water colours (5 year old; brought from home)
8. Tissue papers for the stand (to support the weight)

What we made:

- A beautiful pen and stationaries stand from all the wasted materials we could find in the campus. Very well decorated, can be kept as a show piece in the living room.
- We have made this after returning to the campus (post the 2-year-long Covid break). Our Art-from-waste model can be presented physically if asked.
